CableSafe: Safety Hooks, Cable Safety, Confined Space Safety & Dropped Objects Prevention

Are we really taking 'danger zones' seriously? We've compiled a list of major danger zones in the workplace across different industries:

Areas below lifting operations

A lifting operation is just the same as its name suggests. It allows you to elevate workers or items at the required height.

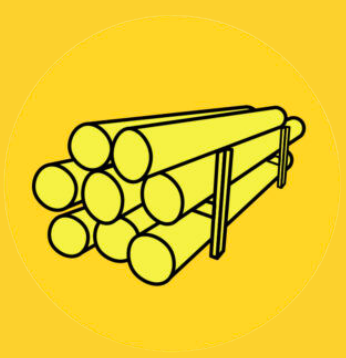

Cranes

A crane is equipped with sheaves, wire ropes and winder that help to lift and lower the material which is beyond human capacity.

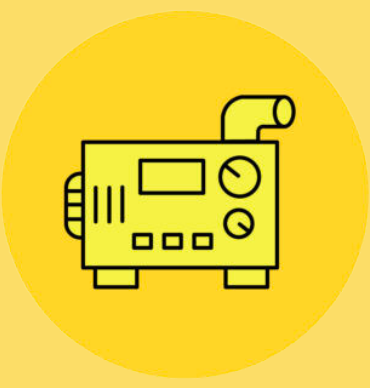

Elevated work areas or platforms

Work platforms aid the workers to get where they need to be. Elevated Work Platforms are used in different work environments.

Pipe Racks

When it comes to supporting mechanical equipment, pipe racks come in the spotlight. Pipe racks generally act as a supporting structure.

Temporary portable equipment

Temporary Portable Equipment is basically an equipment that is not considered as a permanent part of any installation and is removed after certain time period.

Permit-Only Confined Spaces

A confined space entry permit is a document that has to be presented when visiting a permit-only confined space.

Vessel and barges

A vessel is just like a ship. Any type of watercraft which has considerable size can be called a vessel. A barge is a type of vessel that is used as a cargo carrier.

BUILDING AN ENDURING CULTURE OF SAFETY

Building an enduring culture of safety can be the most cost-effective and proven accident prevention process.
